ABOUT US

Akkimova started its journey past a decade with the goal of reaching the forefront of the other providers in our competent race. We are an emergent group of professionals providing best services in CCTV installation in Kochi, and being geographically approachable. With constant research and reach-outs we aim to be the best providers in town uncompromisingly.

Through our smooth and effective management, we see to it that the services we offer help our clients run their business efficiently. We are one of the best options for securing your property with the best CCTV installation services in Kochi. Some of the expansive

Biometric Time and Attendance, EPABX, HD CCTV Surveillance, Networking and Home Security. Through this, we see to it that we provide the customers with a conducive and safe at-

Services

Our range of services covers a wide spectrum of modern technology solutions, including CCTV systems, ensuring the security and surveillance of your premises. We also provide comprehensive networking and Wi-Fi solutions to keep you connected seamlessly. Our intrusion alarm system guarantees your safety, while our PBX business telephone system facilitates efficient communication. With our biometric attendance system, you can streamline attendance tracking, and our biometric access control system offers an advanced level of security. Additionally, we offer top-notch projectors for presentations and displays. Whatever your technological needs may be, we've got you covered with a diverse array of solutions.

CCTV Systems

is a sophisticated surveillance technology that utilizes video cameras to capture and transmit video and audio signals to designated monitors or recording devices.

Computer Networking And Wi-Fi Solutions

encompass the deployment of infrastructure and technologies that enable devices to connect and communicate within a networked environment, either wired or wireless.

Intrusion Alarm System

An intrusion alarm system is a comprehensive security solution designed to detect and alert users to unauthorized access or security breaches within a protected area.

Business Telephone System PBX

A PBX (Private Branch Exchange) Business Telephone System is an advanced telecommunications infrastructure designed for organizations to efficiently manage and route phone calls within their premises.

Biometric Attendance And Access Control Systems

Biometric attendance and access control systems are advanced security solutions that leverage unique physical or behavioral characteristics of individuals for identification and verification purposes.

Public Address System

A Public Address System (PA System) is an electronic sound amplification and distribution system that is used to broadcast audio messages, announcements, music, or speeches to a large or dispersed audience in public spaces or buildings.

Projector

A projector is an optical device used to display visual content, such as images, videos, presentations, or slides, on a large screen or surface.

Smart Classroom Solution

A Smart Classroom Solution featuring Interactive Flat Panels is an advanced educational technology setup designed to transform traditional classrooms into interactive and engaging learning environments.

Fire Alarm System

A fire alarm system plays a vital role in safety across a range of environments like offices, factories, and public buildings.

Flap Barrier

A flap barrier, also referred to as a flap barrier gate or turnstile, is a sophisticated access control system often seen at entrances and exits with heavy pedestrian traffic.

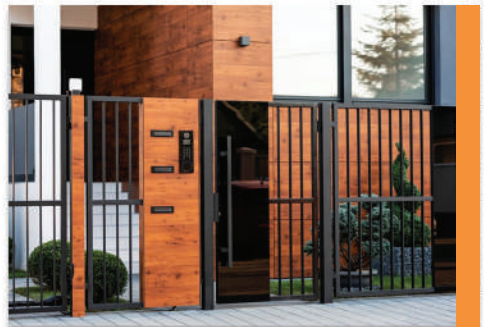

Video Door Phone & Video Intercom Systems

Video door phones, also known as video intercoms or video door entry systems, are security devices used for managing and monitoring entry to residential or commercial properties.

Automatic Gates

Automatic gates, also known as electric gates or automated gates, are a type of entrance or barrier system that opens and closes electronically without the need for manual operation.

RFID Solutions

Library Management with RFID and Vehicle and Parking Management with RFID are both technology-driven systems that enhance the efficiency and security of their respective domains.

Firewall

A firewall acts as a digital gatekeeper within computer networks, diligently analysing incoming and outgoing data packets based on predefined security rules.

Boom Barriers

A boom barrier is a physical security device commonly used in traffic management and access control systems. It consists of a horizontal bar or pole, known as the boom, which can be raised or lowered to control the passage of vehicles.

Guard Patrol System

A guard patrol system is a comprehensive security solution designed to monitor and manage the activities of security personnel during their patrol rounds.
